Early notices of the Mundurucu -- Historical records

175 [13] The Mundurucu villages are located in the valley of the mighty Tapajoz, which was discovered only 130 years ago, in 1748, when the miner João de Sousa de Azevedo traveled down the river from Mato-Grosso to Pará, carrying sixty-four drams of gold extracted from one of its tributaries which he named the Rio das Três Barras. [91]

14 131 In his Corographia Brasilica of 1817, Ayres de Cazal divided the province of Para into four large districts, bounded naturally by the four great tributaries of the Amazon, the Tocantins, the Xingu, the Tapajoz, and the Madeira. For obvious reasons of Mundurucu preponderance in the area, he gave the name of Mundurucania to the district bounded in the east by the Tapajoz, in the west by the Madeira, in the north by the Amazon and in the south by the Juruena. In describing Mundurucania, this author says that with 101 the exception of a few stretches along the banks of the rivers which bound it, the district was completely dominated by various savage nations, the best known being the Juma, the Maué, the Pama, the Parintintin, the Mura, the Andirá, the Arara, and the Mundurucu after whom the country was named.

[302] [386] "The Mundurucu," Ayres de Cazal goes on to say, "who have the custom of dyeing their bodies black with genipap, are numerous, tall, warlike, and feared by all the other nations, who give them the name of Pai-quicé, which means 'head-cutter,' owing [727] to their custom of chopping off the head of any foe who falls into their hands; and they know how to embalm it so as to preserve for many years the appearance it had on being cut.

[623] "They adorn their crude and wretched huts with these horrid trophies. The man who can exhibit ten of them is qualified to be elected chief of the band. They know the virtues of various plants, which they use in curing certain dangerous ailments.

[648] "Nearly all Mundurucu bands are today our allies, and some are already christianized.

461 Whenever I had the opportunity to enter one of those
252 houses, I always found the women working; some wove hammocks, some made flour, others smoked meat, some cooked, some prepared banana mush, etc.

262 They never failed to offer me something to eat: now
574 cooked sweet potatoes, now banana mush. [104]

● [386] A cheerful and merry Indian woman, her face all painted up with urucu dye in addition to the usual designs, offered me a tremendous caterpillar which she held on her finger. It was a repulsive thing which contracted and stretched convulsively; and the woman insisted upon transferring it to my own hand, telling me that it was something to eat: "Cobi-cobi."

XIV

Symbolic characters drawn on the cliff of Cantagalo, on the banks of the Upper Tapajoz, and on the hills of Areu-crê between Acupari and Necodemos.

172 On the left bank of the Upper Tapajoz, in the place known
532 as Cantagalo, fifteen figures are to be seen, drawn on the face of a cliff which is about one hundred meters high and which was carved perpendicularly by the stream.

These figures have been there for ages untold: the oldest frontiersmen who explored the Upper Tapajoz, and the oldest Mundurucu, found them just as they are but do not understand their meaning.

They are dark red, like ocher, and stand about eight meters above the highest level of the water at the time of its maximum winter swelling.

At the present time it would be impossible for a man to draw them at this height, even with the help of scaffolding, for the current is fierce where the river curves in at the base of the cliff, expecially at the time of year when the water level reaches its maximum height.

302 Men as well as women derive great satisfaction from these strange ornaments.

304 The tattoing procedure is extremely painful.

It begins when the child reaches the age of eight. As might be expected, the child does not surrender of his own will to this agony; but he is taken by force, thrown upon the ground, and deprived of any motion.

[325] Then the painter traces the designs on the child's body with a sharp agouti tooth, [115] drawing blood.

[386] The indelible juice of the genipap is then applied to the incisions. These intentional wounds usually become inflamed, and fever sometimes ensues. For this reason, the operation is performed as a rule during the winter months, when the effects of the heat are less intense.

It is slow work: the first wounds are permitted to heal before the task proceeds. This renders the procedure so leisurely that the painting is only completed when the youth is nearing twenty.

304 619 It thus seems to be a sort of blood initiation -- a social bond -- a consecrated tie -- which, like the individual ring in a chain, connects every member of the tribe to every other.

It is their most intimate bond and its origin, according to tradition, goes back to Caru-Sacaebê

XVII

Time measurements -- Beliefs --Burial customs.

[824] 805 The Mundurucu call the sun caxi.

They differentiate summer and winter, calling the former coatu and the latter ixi.

They say that winter begins when the chestnuts begin to fall. And indeed the fruits of the chestnut (Bertholetia excelsa) begin to fall as soon as the rains come. [116]
